

**TREND OF TRAFFIC ACCIDENT FROM 2012 UNTIL 2016 BASED ON  
THE ACCIDENT REPORT DATA AND POLICE INVESTIGATION  
REPORT OF TRAFFIC ACCIDENT  
FROM BOGOR CITY POLICE<sup>1</sup>  
Bunga Oktara<sup>2</sup>  
StiKes Wijaya Husada**

**ABSTRAK**

*World Health Organization (WHO) declared a traffic accident could claim about 1,2 millions human lives every year and the injured or difabled victim could reach more than 50 millions people. Preliminary study results in from Bogor City Police showed that there was an increase in traffic accidents by 100 accidents in 2015 to 148 accidents in 2016.*

*The purpose of this research is to know the trend of traffic accident during five years from 2012 until 2016 based on the accident report data and Police Investigation Report of traffic accident from Bogor City Police.*

*The type of this research is descriptive quantitative by using secondary data. The method of taking sample in this research is using total sampling technique with the amount of sample 609.*

*The results showed the trend of traffic accidents increased from 2012 to 2014 and from 2015 to 2016, decreased from 2014 to 2015. The most common accidents occured in the type of motorcycle vehicle with male riders, aged between 12 years to 25 years, work as private employee, and have a high school education background. The most common types of accidents are double at two-way locations at 18.01-24.00 with the impact of injuries and caused by unskilled drivers.*
